

### Trans4m selects TILOS for their Linear Project Management

26th April 2005 – Trans4m, a London-based engineering company, has selected TILOS time/location project management software for their Project Management. TILOS has been designed specifically for the construction industry to plan linear construction projects such as road, rail, bridge, pipeline & tunnel build and maintenance projects.

Mike McCullen, Managing Director of Asta Development, said 'Following the successful launch of TILOS in the UK in 2004, Asta are pleased to win Trans4m as a key customer. Trans4m are well respected in the Civil Engineering community and we are certain that they will find that TILOS lives up to its reputation'

Grahame Cain, Trans4m Planning and Logistics Manager, said 'TILOS is an excellent software tool that we believe will prove a valuable aid in the effective and efficient planning of our projects.'

TILOS visually displays project plans in terms of both time and distance so planners can clearly see, for example, the status of a road build project in terms of what needs to be done on each section of the road and by when. TILOS is the only system that combines the features of a drawing program and a project management system, including scheduling, resource and cost management. The package can output plans to other software solutions such as Microsoft Project, P3, Excel and Asta Powerproject.

For full details of TILOS and to request a free trail of the software, please visit [www.astadev.de/tilos](http://www.astadev.de/tilos).
